

Advancing **QUALITY** and **PRODUCTIVITY**
with **3D SMART INSPECTION TECHNOLOGY**

Integrated Scanner, robot and software solution for

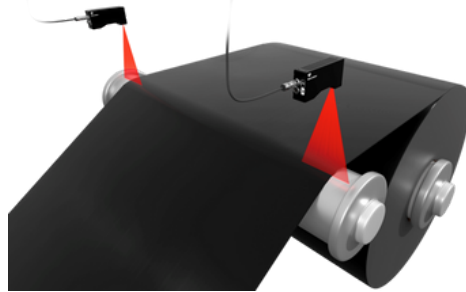

- Automated inspection of components
- CAD comparison
- GD & T measurements
- Assembly fit & check
- Customized solution for specific application need
- up to 19,00,000 point/s scanning speed

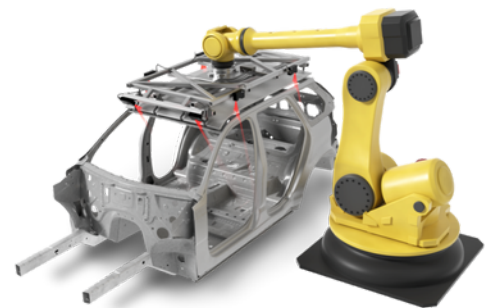

2.5X FASTER THAN CONVENTIONAL SCANNING SYSTEMS

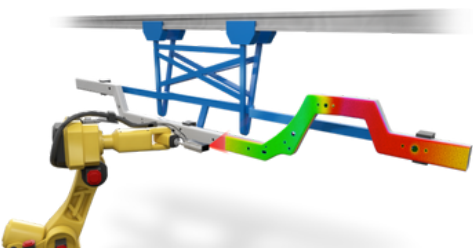

Gap & Flush Measurement

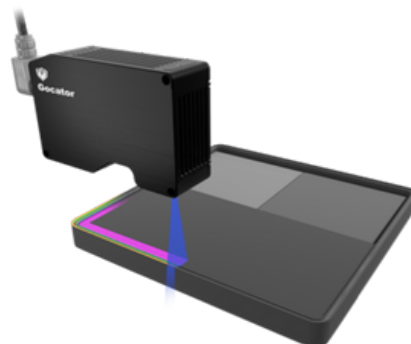

Ply Splice & Width Measurement

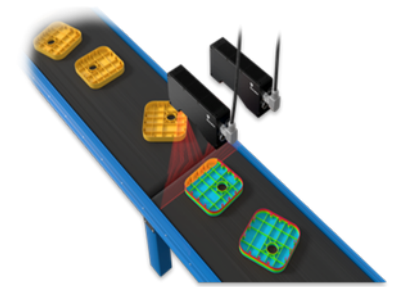

Robotic Pick & Place

Profiles & Dimensional Measurement

Glue Bead Uniformity

3D Measurements on speed

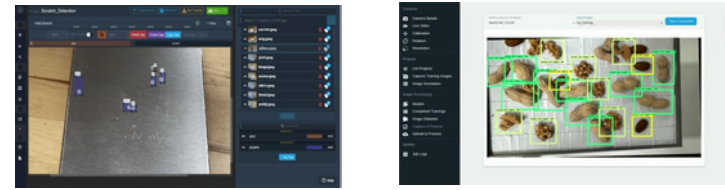

measure control automate

automate

Flexible Vision is a machine vision solution that enables your team to quickly and easily solve difficult visual inspections.

- GigE POE cameras
- USB camera compatible
- Industrial grade processor unit
- Works with traditional machine vision cameras
- High speed and high Accuracy
- Train and deploy in 30 minutes
- Logical Tools Sets
- No programming required
- On-prem or cloud based
- Track and Analyze

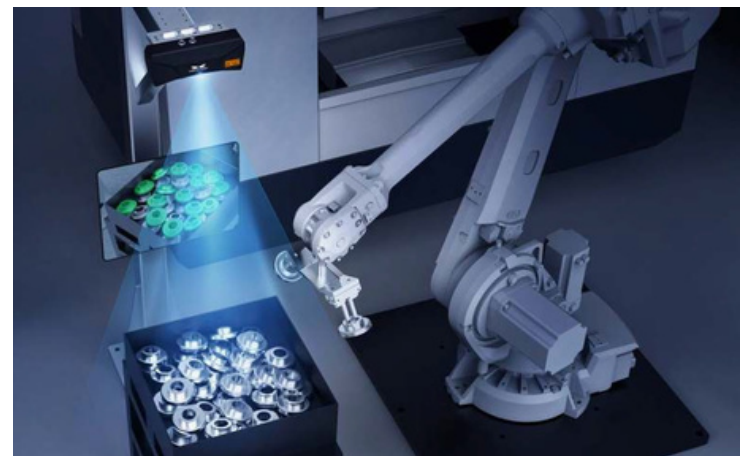

High Speed Inspection machine is a special purpose machine designed to inspect dimensions and visual defects of small size components

- Bowl feeder for automatic feeding and aligning
- Automatic sorting of OK/NG components
- Measures dimensions
- Inspects visual defects

All-in-one AI+3D intelligent robot solutions
Depalletizing & Palletizing
Piece Picking
Bin Picking

Guided by Mech-Mind 3D vision system, robots can recognize randomly-piled materials, even those with dark or reflective surfaces and complex structures, and then pick them up from deep bins accurately without damaging the components.
